

ISO/TC 154 "Processes, data elements and documents in commerce, industry and administration"

Secretariat: SAC

Committee manager: Zhang Jianfang Mr

Resolution V-2026-04 Adoption of a ISO/PWI TR project "Gap analysis of high-level and general data concepts"

Document type	Related content	Document date	Expected action
Ballot / Result of voting	Ballot: Draft Resolution V-2026-04 Adoption of a PWI registration (restricted access)	2026-08-03	INFO

Description

This document is the result of voting on the Draft Resolution V-2026-04.

The CIB is approved (6 P-members approval, 13 P-members abstention, without disapproval) and comments from KATS were received.

The Draft Resolution V-2026-04 is approved and the following is the final approved Resolution V-2026-04.

Resolution V-2026-04 Adoption of a PWI registration for the TR project "Gap analysis of high-level and general data concepts".

Result of voting

Ballot Information

Ballot reference	Draft Resolution V-2026-04 Adoption of a PWI registration
Ballot type	CIB
Ballot title	Draft Resolution V-2026-04 Adoption of a PWI registration for the TR project "Gap analysis of high-level and general data concepts"
Opening date	2026-06-29
Closing date	2026-07-29
Note	Note1: This TR proposal "Gap analysis of high-level and general data concepts" was presented and discussed at WG7 meeting in April and May, and WG7 meeting of 7 May agreed to initiate a CIB to register the project as PWI sgate. Note2: The scope of this TR proposal is that "this TR document aims to establish the relationship among the high-level and general data concepts or terms, and it is applicable to all kinds of data users in commerce, industry and administration, and it can also be referenced to other sector(s). " Note3: when ISO/NP 26087 ballot is approved and a new WG with a possible title "carbon data" will be established accordingly. As per the meeting discussion and minutes of 7 May, it is planned to assign this TR project to the new WG at that time.

Project:

MB/ NC ¹	Line number	Clause/ Subclause	Paragraph/ Figure/Table	Type of comment ²	Comments	Proposed change	Observations of the secretariat
KR-001	N/A	Applicability	Scope statement	te	High-level concepts and data governance become operationally meaningful only when traceably applied to granular data elements, relations, controls and state transitions in concrete scenarios. Wide applicability should therefore be demonstrated through at least three carbon-credit cases: issuance after MRV and verification; authorization, transfer, conversion and use across systems, including voluntary-to-voluntary and voluntary-to-compliance pathways; and cancellation or retirement with claims and accounting.	For each case, map actors and authority, source and target identifiers, evidence and provenance, quantities, status events, time and version, and security controls to the selected concepts and nine lifecycle stages. Show lineage, hand-offs, branches, iterations and mapping loss, and distinguish recognition, migration, cancellation/reissuance and legal or accounting conversion from data interchange.	
KR-002	N/A	Concept set	Slide 7	te	Reusing concepts already defined in ISO standards and available through OBP is appropriate and supports terminology consistency. However, the 27 selected concepts occupy different meta-categories and abstraction levels; without a systematic ordering and traceable relations, an apparent gap may instead be a domain concept expressible through an existing construct or a context-dependent definition.	Retain the existing ISO definitions and cite each source and edition. Organize the concepts by meta-category and systematic relations (exact, broader, narrower, contextual or conflicting), define selection criteria and gap types, and add a new definition only where no suitable ISO definition exists, with justification.	
KR-003	N/A	Data lifecycle	Slide 12	te	The nine stages may subsume acquisition, validation, publication, use and updating, but their boundaries and mappings are unclear. Metadata, quality, provenance, governance, integrity and authentication can apply throughout, and the flow is not necessarily linear.	Define each stage's scope, sub-activities, inputs, outputs and relationships. Permit many-to-many, iterative and branching mappings; treat cross-cutting concepts separately; distinguish the generic data lifecycle from document, transaction, carbon-asset and legal or accounting lifecycles.	
KR-004	N/A	Scope	Slides 4, 14-15	ge	Relevant parallel work and project boundaries are not yet sufficiently developed. Slide 4 cites ISO/IEC 11179, but does not explain how its registry and terminology mechanisms will be reused; ISO/AWI TS 32214 is developing the carbon project, batch and unit data model under ISO/TC 322-ISO/TC 68 JWG 1. The TR should remain complementary.	Add a related-work and liaison section defining boundaries, reuse and hand-offs with ISO/IEC 11179, ISO 26087 and ISO/AWI TS 32214. State that the TR will not replace source definitions or develop a competing carbon schema.
